

The Propeller Spinner Bf-109F
For 1/48 Zvezda Bf-109 F -2, F-4 kits

48004

This is simply replacement of kit part (no. A 22), which has improper blunt shape.

Our product captures correctly profile and details of Bf-109F propeller spinner.

Main body, characteristic tear-drop shaped cutouts for propeller and flanged spinner tip are carefully rendered. Of course, the body of our spinner is hollow, like in injected kit.

Smart design of pattern model and original casting technology minimizes working effort of modeler to install our part on Zvezda kit. You will only have to slightly reduce height of mounting tabs on original kit's spinner backplate (part no. A 26). Necessary sanding of spinner edges and cleaning-up of prop cutouts is minimal. Carefully drill a hole (ca.1,7 mm) for blast tube.

The blast tube is made as separate detail so can be adjusted depending on example of aircraft you choose. Please check your own detail reference. 109's differed from each other in this respect.

No original kit parts were used during creation of pattern model.

Work like with usual resin parts:

Use dust mask to protect respiratory system. Wet sanding is recommended. Avoid contact resin dust with eyes and (prolonged) with skin. May cause irritation or sensitization. Disposable gloves and safety goggles are recommended.

Before painting degrease surface with Testors Plastic-Prep or pure benzine (petroleum ether).

Do not use paint thinner or gasoline. Do not use benzine to degreasing styrene plastic parts.

Prime with good plastic primer (Mr.Hobby: Mr. Resin Primer, Mr.Surfacer 1000), automotive plastic primer or good enamel paint.

Join parts with medium viscosity cyanoacrylate and 5-minute epoxy glue.

Always work in well ventilated area.

Take caution when handling with flammable materials.
